A/C

Dear Sir;

August 13, 1945

I am writing you this letter on the advice of a newsmen of a local radio station. Last night, August 12, at 11:04 p.m. two (2) unidentified flying objects flew over my area. They flew from East South East to West North West at an altitude of about 7,000 feet. The objects flew in a single formation of one in back of the other. They each had five lights, one of which was a bright yellow, the others were white. There were no engine sounds from them from the time we first saw them until we lost sight of them.

A say we became there were four (4) other people who saw them beside myself. Their names are listed below.

I have been studying astronomy for almost eight (8) years now, and I'm pretty sure I can tell a plane or a meteorite or a satellite when I see one, and I'm positive that these objects

were none of them. I have called my  
local Air National Guard and Airport  
and the Quonset Point Naval Air  
Station. None of them had any flights  
in the air at the time of our  
sighting. I saw the objects through  
my telescope. It is a 120 power one.

Behind the lights I could make  
out a gray shadow in a shape of  
a disk, all the lights were  
connected to this body. I'm writing  
you this letter in the hope that  
it might change your view on  
flying saucers and you'll do a  
little bit more than sit behind  
a desk and say that all these  
sightings are planets and stars.

Sincerely yours

[REDACTED]
