PAGE TWO 55 KNOTS THE TOP OF HEIGHT RANGE INDICATOR INDICATION WAS 16, 000 FEET AND THE AVERAGE BEING 12, ØØ FEET. SEE REMARKS SECTION. NO ACFT WERE SCRAMBLED ON THIS TRACK. CIVIL AERONAUTICS ADMINISTRATION HAD BEEN NOTIFIED OF THE SITUATION ADN 2 COMMERCIAL AIRLINERS PASSING 35 MILES NORTH OF THE TRACK SEARCHED OVER IT ON THEIR RADAR EQUIPMENT WITH NEGATIVE RESULTS. IT SHOULD BE CONSIDERED THAT THIS WAS AT A TIME WHEN THE TRACK WAS ONLY 30 MILES FROM THIS STATION AND IT HAD BECOME VERY WEAK AND WAS BEGINNING TO FADE INTO THE GROUND CLUTTER. IT ALSO WAS AT A MUCH LOWER ALTITUDE AT THIS TIME. WE FIRST PICKED UP THIS TARGET I TALKED TO BOTH SHORTHORN (747 AIRCRAFT CONTROL AND WARNING SQUADRON) AND GOATEE (653 AIRCRAFT CONTROL AND WARNING SQUADRON). THEY BOTH HAD RADAR CONTACT AND BOTH ASSUMED TO BE WEATHER. I DID NOT BECOME CONCERNED WITH THE TRACK UNTIL WE HAD OBSERVED IT FOR A WHILE AND IT HAD MOVED ABOUT 40 MILES TOWARDS THIS STATION. AT THIS TIME BOTH THE OTHER SITES HAD LOST CONTACT WITH IT DUE TO RANGE. LIEUTENANT BECK WAS ON DUTY AT 747 AIRCRAFT CONTROL AND WARNING SQUADRON AND LT CAHILL AT 653 AIRCRAFT CONTROL AND WARNING SQUADRON. THE TARGET WAS OBSERVED ON MPS-7 AND MPS-14 RADAR EQUIPMENT. THE SEARCH SCOPES WERE UPA-35 AND OA-175.

## UNCLASSIFIED

PAGE THREE THE HEIGHT RANGE SCOPE WAS OA-270. NO MAINTENANCE DIFFICULTIES HAD BEEN ENCOUNTERED RECENTLY. A THYRATHRON TYPE MODULATOR IS USED IN BOTH SETS. THE AUTOMATIC FREQUENCY RADAR CONTROL CIRCUIT WAS OPERATING PROPERLY. THIS STATION EXPERIENCES. THE USUAL INTERFERENCES ENCOUNTERED IN RADAR AND ALL PERSONNELL ARE FAMILIAR WITH IT. ALL PERSONNEL ARE FAMILIAR WITH AP ON THE EQUIPMENT USED. THERE WAS NO AP EXTENDING THE GROUND CLUTTER AT THE TIME OF THE OBSERVATION. THE TARGET WAS MUCH LARGER THAN NORMAL TRAFFIC RADAR RETURNS. WHEN FIRST OBSERVED IT WAS /10 MILES IN DIAMETER AND AS IT APPROACHED THIS STATION IT ELONGATED, BECOMING 15 MILES LONG AND 10 MILES WIDE. NO OTHER TARGETS WERE OBSERVED NEAR THIS ONE. I INTERROGATED MODETEL ON IDENTIFICATION FRIEND OR FOE LOOKING FOR STRATEGIC AIR COMMAND AIRCRAFT WITH NEGATIVE RESULTS . PLANNED POSITION INDICATOR TYPE SCOPES WERE USED GIVING A STRONG SIGNAL AT FIRST. TO BETTER OBSERVE THE TARGET I OFF CENTERED AND EXPANDED OUT A UPA-3 TO A RANGE OF 50 MILES. THE SIGNAL WAS LIGHT YELLOW IN ITS ENTIRE AREA WITH GROUPS OF SMALL INTENSE SPOTS. THE SIGNAL BECAME WEAKER WHEN IT REACHED LAND AND IN THE END BEFORE IT FADED IN THE GROUND CLUTTER THE SIGNAL WAS NOTHING BUT A GROUP OF SMALL INTENSE SPOTS. A SCAN RATE OF 5 REVOLUTIONS PER MINUTE WAS USED. THE FREQUENCE OF THE SEARCH WAS 1296 MEGACYCLES AND THE RANGE INDICATOR 2785 MEGACYCLES. REMARKS: THE REASONS FOR MY CONCERN ON THIS TRACK WERE (1) IT SEEMED UNLIKELY THAT THIS WAS WEATHER MOVING SO FAST AND ALL

DECLARAGE AT THE REPRESENTANTAL UNCLASSIFIED

## UNCLASSIFIED.

PAGE FOUR STATIONS WERE FOLLOWING CLEAR WEATHER, (2) THE POSSIBILITY OF CHAFF WAS CONSIDERED BUT THE HEIGHT RANGE INDICATOR INDICATION WAS 10, DOO FEET LONG AND 10 MILES WIDE MAKING IT SEEM UNLIKELY TO BE CHAFF. FURTHERMORE, CHAFF SURELY WOULD HAVE DISPERSED MORE IN THE DISTANCE IT TRAVELLED UNDER OBSERVATION. AN OTHER UNUSUAL FACT WAS THAT IT STEADILY DECREASED IN ALTITUDE ENDING UP AT ABOUT 3000 FEET BEFORE IT FADED. IT ALSO SLOWED TO 30 KNOTS UPON REACHING LAND. 3 HOURS AFTER THE TRACK HAD FADED IT WAS DISCOVERED THAT THE CURVATURE OF EARTH CORRECTION ON DUE HEIGHT RANGE INDICATOR WAS NOT FUNCTIONING PROPERLY. THIS MAKES OUR ALTITUDES IN ERROR. THE ERROR INCREASED WITH RANGE. BY EXPERIMENTATION I FOUND THE ERROR TO BE 15, DOD FEET AT THE RANGE OF INITIAL PLOT. THEREFORE, THE INITIAL RANGE MUST HAVE BEEN 31, ØØØ FEET INSTEAD OF 16, ØØØ FEET. THE ALTITUDES CLOSER IN THE STATION ARE SUFFICIENTLY ACCURATE

COMMENT NO. 1

AFCIN-4Ela/V. D. Bryant/jc 72131/Bldg 263-D/Rm 8

1. The subject report, submitted by 657 ACWRON, Houm, Alabama, refers to a target "15 miles long and 10 miles wide". Lacking any visual observation of so huge a target, and inability of airborne radars to pick up the target (while searching the area for it) at 35 miles, it must be considered as obviously a false return on the radar. Just what caused this false return is not known, and while the weather may not move fast, the results of such weather changes frequently do move at very high rates of speed, due to reflections, and the angles at which the signals are reflected. Returns such as the one under discussion usually are due to phenomena brought about by some weather condition. The fact that no aircraft were scrambled for such an unusual target indicates there must have been compelling doubts in the minds of the operating personnel as to the authenticity of the subject targets.
