Dear Mr.

Reference your letter of January 23 regarding your photograph of an alleged unidentified flying object (UFC) on the night of January 17, 1967.

Information now available to us is not sufficient to allow us to analyze your sighting. However, it is impossible to have seen Jupiter, Mars, and Venus at the same time. As an amateur astronomer, I am sure you are well acquainted with the American Epheminis and Mautical Almanac 1967. According to this text, on January 17, 1967 Venus set at approximately 6:00 P. M. EST, Mars rose at approximately 11:50 P. M. EST, while Jupiter rose at 5:30 P. M. EST.

If you would complete the inclosed FTD Form 164 on your sighting, and in addition provide the following camera data, a detailed study will be made. The camera data necessary is as follows:

- a. Type of camera.
- b. Type of film.
- c. Focal length of camera.
- d. Lens manufacturer.
- e. Exposure time.
- f. "F" stop.

Thank you for reporting your observation to the Air Force.

Sincerely,

GEORGE P. FREEMAN, JR.

Proposed reply to letter from John Zoppi, 28 January 1967

17 Jan 67
Berkendens
Dennsylvania

Dear Mr. 1

Reference your letter of 28 January 1967 regarding your photograph of an alleged unidentified flying object on the night of 17 January 1967. Without essential data and additional information on the sighting a meaningful analysis is not in order. In spite of the information which you submitted it is impossible for you to have seen Jupiter, Mars, and Venus at the sameetime. As an amateur astronomer, I am sure you are well acquainted with the American Epheminis and Nautical Almanac 1967. According to this text, on 17 January 1967, Venus set at approximately 6:00 P. M. EST, Mars rose at approximately 11:50 P. M. EST, while Jupiter rose at 5:30 P. M. EST. Thus it would have been impossible for you to have seen the three planets at the same time, a mistake on your part, I am sure.

If you would complete the inclosed FTD Form 164 on your sighting and in addition provide the following camera data, a detailed study will be made. The camera data necessary is as follows:

- a. Type of camera
- b. Type of film
- Focal length of camera
- d. Lens manufacturer

La Safacie 14 Feb 67

- e. Exposure time
- f. "F" stop

Thank you for reporting your observation to the USAF.

Dear Sirs:

On the night of January 17,1967

I was out studying weather conditions
for I am an amateur astonomor. The moon
was just about full on the night of the
the sighting. I gazed up at the moon and
I saw this object above and to the right
of the moon. I quickly ran inside and got
my Poloroid camera and snapped only one
picture before it sped away. Being an
amateur astronomor you can not give me the
explanation that it was a star or planet.
The planet Jupiter was in the east, Mars
was in the south and Vonus was in the
west. Please send no an explanation.

Sincerly.
