Attn: Unidentified Flying Object Investigation Committee

Dear Sir:

On the night of 5 November 1965, at approximately 2030 hours, I observed a large bright pulsating red light fixed in the sky at about 15 degrees in a southerly direction looking towards Woonsocket R.I. from the above address. I summoned my wife and two visiting friends, Mr. and Mr████ to witness the same. We all watched it as another came into view from the east and hovered momenrarily and then slowly moved towards the first and seemed to merge with it into one large pulsating light. They held this position for a few moments and then one object left towards the west. As this was happening a third object came into view from the east and became motionless along side the first. It is to be noted that not a sound was heard.
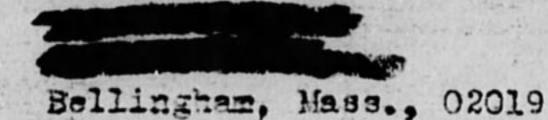

At this point, approximately 2045 hours, Mr████ and I sped down to a clearing off of Hartford Ave. and Farm Street, to get a better view. We were watching the second object in a Southeast direction when we suddenly noticed two huge red glowing oval shaped lights, with smaller white light integrated between them, coming at us from the S.W., and real low, just over the tree tops. When it got almost over us we could just about make out a blunt nose fuselage, silvery in appearance. As it slowly but steadily glided overhead the only sound to be heard was that of air rushing over it. We could then see only two white lights spaced apart in a horizontal plane as it headed towards the N.E. at the same low altitude and disapeared from view. The second object, still at a distance, soon moved off in an arc towards the N.W.

Just prior to leaving for the cleared area I had loaded a roll of 8mm color, outdoor, ASA 25, movie film in my camera and had attempted to film the above mentioned low flying object at wide open lense. However, since I forgot to run the leader thru prior to this, I doubt very much if I was successful in obtaining anything as my footage indicator shows that only the leader was exposed. In any case the film is still in the camera, and when it is exposed I will attempt to have it specially processed to include the leader in the event I may have gotten something worthwhile.

In closing I would like to point out that I have witnessed these strange manuvering red pulsating objects in this area over the past few months, except that, in the past, they appeared singulary.

Sincerely yours,

Mechanical Engineer

is very close by—

Cause Of Power Failure?

Strange Object In The Sky Unnerves 'Hill Youngsters

Although numerous persons felt some apprehension because they were out of contact with the outside world with no telephones or radios operating in many cases, none reported being so disturbed as two Cumberland Hill teenagers, who were walking home from football practice after the electricity was cut off, and saw a strange phenomenon in the sky.

Tommy Nichols, 14, of 11 Aiton Ave., and Robert Hebert, 15, of 15 Abbott St., said they saw a bright object near the full moon which grew bigger and bigger, then seemed to separate into two points of light, then gave a "whoosh" sound and a "boom" before disappearing.

The boys said "it was real red and big like a large round ball that flared up

and then it took on an elongated shape. It was like many bright stars all clustered together against the yellow of the full moon."

The boys said they knew the object was too big to be a star and that it increased its size many times before disappearing. They were unnerved by the experience and wondered if anyone else had seen it, or whether it was connected in any way with the power failure.

7 Trucks, Cars Crash

NORWOOD, Mass. (AP) — Seven cars and trucks were involved today in a chain reaction collision in heavy smoke and fog near a smouldering brush fire
